

1Y0-231 PDF Dumps Apr 15, 2023 Exam Questions ? Valid 1Y0-231 Dumps [Q10-Q26]

1Y0-231 PDF Dumps Apr 15, 2023 Exam Questions – Valid 1Y0-231 Dumps [Q10-Q26]

1Y0-231 PDF Dumps Apr 15, 2023 Exam Questions – Valid 1Y0-231 Dumps
Ultimate 1Y0-231 Guide to Prepare Free Latest Citrix Practice Tests Dumps

Exam Format

The actual test contains 70 questions in multiple-choice format. Out of these items, some are unscored and they won't affect the final score of the test-takers. To come up with flying colors in this exam, one has to score 68% marks. Understanding the exam time limit is a complex task as it varies as per test language. Native speakers with their mother tongue as English will have 105 minutes to attempt the official evaluation. For the countries where English is declared a foreign language, non-native aspirants will have 135 minutes to complete the test. Likewise, candidates who are non-native speakers and appearing for the exam from a country where English is not a foreign language can request for the time extension of 30 minutes from Citrix. As a rule, Pearson VUE bears the responsibility of conducting this Citrix exam at multiple locations. To know more, the certification validity cycle is three years and it is recommended to commence the recertification journey before the cycle ends if one wants to relish over the certification perks. Speaking of the exam expense, it varies as per the location of the candidate. As the Citrix 1Y0-231 exam is of the associate level, one has to pay \$200 for it. Note that those who are adopting the phone registration rather than the Pearson VUE website will have to pay \$7 for this.

Citrix 1Y0-231: Deploy and Manage Citrix ADC 13 with Citrix Gateway is an intermediate-level certification exam that tests candidates' knowledge and skills in deploying and managing Citrix ADC 13 with Citrix Gateway. This exam is designed for candidates who are familiar with Citrix ADC 13 and its functionalities and want to enhance their knowledge and skills in deploying and managing Citrix Gateway. The exam is ideal for those who are responsible for managing and deploying Citrix ADC 13 with Citrix Gateway in their organizations.

NO.10 While applying a new Citrix ADC device, a Citrix Administrator notices an issue with the time on the appliance.

Which two steps can the administrator perform to automatically adjust the time? (Choose two.)

- * Add an SNMP manager.
- * Add an SNMP trap.
- * Enable NTP synchronization.
- * Add an NTP server.
- * Configure an NTP monitor.

NO.11 Scenario: After deploying a Citrix ADC in production, a Citrix Administrator notices that client requests are NOT being evenly distributed among backend resources. The administrator wants to change from the default load-balancing method to one that will help distribute the load more evenly.

Which load-balancing method would ensure that the server with the least amount of network utilization is receiving new connections?

- * Least response time
- * Least bandwidth
- * Least connection
- * Least packets

Explanation/Reference: <https://kb.wisc.edu/ns/page.php?id=13201#Least%20Bandwidth%20Method>

NO.12 A Citrix Administrator wants to customize the look of the landing page presented to users during the authentication process on Citrix ADC.

Which nFactor component should the administrator modify in this scenario?

- * Logon Schema
- * Pass-through factor
- * Next factor
- * NoAuth Policy

Explanation/Reference: <https://docs.citrix.com/en-us/citrix-adc/current-release/aaa-tm/authentication-methods/multi-factor-nfactor-authentication/nfactor-authentication-configuring.html>

NO.13 In a single-hop deployment, a Citrix Administrator needs to use a client's IP address as the source IP address for Citrix ADC-to-server connections.

Which Citrix ADC mode can the administrator use to meet this requirement?

- * USIP
- * USNIP
- * Layer 2
- * Layer 3

NO.14 Scenario: A Citrix Administrator needs to create local, limited-privilege user accounts for other administrators.

The other administrators will require only:

- * The ability to enable and disable services and servers
- * Read-only access

Which built-in command policy permission level can the administrator use?

- * Read-only
- * Operator
- * Sysadmin
- * Network

NO.15 Scenario: A Citrix Administrator configures an access control list (ACL) to block traffic from the IP address 10.102.29.5:

```
add simpleacl rule1 DENY -srcIP 10.102.29.5
```

A week later, the administrator discovers that the ACL is no longer present on the Citrix ADC.

What could be the reason for this?

- * The administrator did NOT run the apply ACL command.
- * The simple ACLs remain active for only 600 seconds.
- * The simple ACLs remain active for only 60 seconds.
- * The Citrix ADC has been restarted without saving the configurations.

NO.16 Scenario: A Citrix ADC MPX is using one of four available 10G ports. A Citrix Administrator discovers a traffic bottleneck at the Citrix ADC.

What can the administrator do to increase bandwidth on the Citrix ADC?

- * Add two more 10G Citrix ADC ports to the network and configure VLAN.
- * Add another 10G Citrix ADC port to the switch, and configure link aggregation control protocol (LACP).
- * Purchase another Citrix ADC MPX appliance.
- * Plug another 10G Citrix ADC port into the router.

NO.17 Scenario: While attempting to access a web server that is load-balanced by a Citrix ADC using HTTPS, a user receives the message below:

SSL/TLS error: You have not chosen to trust “Certificate Authority” the issuer of the server’s security certificate.

What can a Citrix Administrator do to prevent users from getting this message?

- * Ensure that the server certificate is linked to its respective intermediate and root certificates.
- * Ensure that users have the server certificate installed.
- * Ensure that users have the certificate’s private key.
- * Ensure that users have the certificate’s public key.

Explanation/Reference: <https://docs.citrix.com/en-us/citrix-gateway/12-1/citrix-gateway-12.1.pdf>

NO.18 A Citrix Administrator deploys a new Citrix ADC MPX appliance in the demilitarized zone (DMZ), with one interface in the DMZ and the other on the internal network.

In which mode should the administrator deploy the Citrix ADC?

- * Two-arm
- * One-arm
- * Forward proxy
- * Transparent

NO.19 Scenario: A Citrix Administrator suspects an attack on a load-balancing virtual server (IP address 192.168.100.25). The administrator needs to restrict access to this virtual server for 10 minutes.

Which access control list (ACL) will accomplish this?

- * add ns acl rule1 DENY -destIP 192.168.100.25 -TTL 600000
- * add simpleacl rule1 DENY -srcIP 192.168.100.25 -TTL 600000
- * add ns acl rule1 DENY -destIP 192.168.100.25 -TTL 600
- * add simpleacl rule1 DENY -srcIP 192.168.100.25 -TTL 600

NO.20 Scenario: While attempting to access a web server that is load-balanced by a Citrix ADC using HTTPS, a user receives the message below:

SSL/TLS error: You have not chosen to trust “Certificate Authority” the issuer of the server’s security certificate.

What can a Citrix Administrator do to prevent users from getting this message?

- * Ensure that the server certificate is linked to its respective intermediate and root certificates.
- * Ensure that users have the server certificate installed.
- * Ensure that users have the certificate’s private key.
- * Ensure that users have the certificate’s public key.

NO.21 Scenario: A Citrix Administrator needs to integrate LDAP for Citrix ADC system administration using current Active Directory (AD) groups. The administrator created the group on the Citrix ADC, exactly matching the group name in LDAP.

What can the administrator bind to specify the permission level and complete the LDAP configuration?

- * Users to the group on the Citrix ADC
- * A nested group to the new group
- * An authentication, authorization, and auditing (AAA) action to the group
- * A command policy to the group

Explanation/Reference: <https://support.citrix.com/article/CTX123782>

NO.22 Which profile can a Citrix Administrator create to configure a default profile that disables TLSv1?

- * DTLS
- * TCP
- * HTTP
- * SSL

NO.23 Scenario: To meet the security requirements of the organization, a Citrix Administrator needs to configure a Citrix Gateway virtual server with time-outs for user sessions triggered by the behaviors below:

- * Inactivity for at least 15 minutes.
- * No keyboard or mouse activity for at least 15 minutes

Which set of time-out settings can the administrator configure to meet the requirements?

- * Session time-out and client idle time-out set to 15
- * Session time-out and forced time-out set to 15
- * Client idle time-out and forced time-out set to 15
- * Client idle time-out and forced time-out set to 900

NO.24 The Citrix ADC SDX architecture allows instances to share _____ and _____. (Choose the two correct options to complete the sentence.)

- * the kernel
- * CPU
- * memory
- * physical interfaces

NO.25 Scenario: A Citrix Administrator deployed a Citrix ADC in one-arm mode. Currently, the VLANs 20, 30, and 40

are tagged on the interface with the option of `tagall`;

What is true regarding the VLANs, when `tagall` is enabled on the interface?

- * VLANs 1, 20, 30, 40, and HA packets are tagged on the interface.
- * VLANs 20, 30, and 40 are tagged on the interface.
- * VLANs 1, 20, 30, and 40 are tagged on the interface.
- * VLANs 20, 30, 40, and HA packets are tagged on the interface.

NO.26 Scenario: Users are attempting to logon through Citrix Gateway. They successfully pass the Endpoint Analysis (EPA) scan, but are NOT able to see the client choices at logon.

What can a Citrix Administrator disable to allow users to see the client choices at logon?

- * Quarantine groups
- * Client choices globally
- * Split tunneling
- * nFactor authentication
