&#8211; 10.100.1.33

One more Windows Server machine has been found by the MID Server but it has different login credentials and its IP address is 10.100.1.44.

Given that during discovery two different Discovery Credential records were created, one for the

10.100.1.11 server and the other for the 10.100.1.44 server. Which scenario is the most likely for servers

10.100.1.22 and 10.100.1.33?

Response:
