[Sep 18, 2023 Valid P_C4H340_24 Test Answers Full-length Practice Certification Exams Accurate & Verified 2023 New P_C4H340_24 Answers As Experienced in the Actual Test! QUESTION 15

Which order-splitting strategies are provided in the basecommerce extension? Note: There are 3 correct answer to this question.

- * Split by payment method
- * Split by order date
- * Split by named delivery date
- * Split by stock availability
- * Split by warehouse

QUESTION 16

What type of class should you implement when you need to change the trigger for recalculating the user experience results?

- * A populator
- * An interceptor
- * A voter
- * A controller

QUESTION 17

How are relations modeled in the database? Note: There are 2 correct answer to this question.

- * One-to-many relations are stored in the links table.
- * One-to-many relations are binary objects.
- * One-to-many relations are stored in a column.
- * Many-to-many relations are deployed as a table.

QUESTION 18

To define the data that gets extracted into the Solr index for searching, what do you need to provide? Note: There are 2 correct answer to this question.

- * A flexible search query for an incremental update
- * A solrconfig XML file
- * An ImpEx script for a full load
- * A flexible search query for a full load

QUESTION 19

You are creating a product with a new feature using a classification system. What should you pay attention to? Note: There are 2 correct answer to this question.

- * Use feature descriptor values if the values of the new feature are limited to a selection.
- * Create an empty classification unit even if the new feature doesn't have a unit.
- * Use a feature descriptor to represent the name of the new feature and assign it to the product.
- * Create a classifying category with an attribute assignment model and assign it to the product.

QUESTION 20

You are creating a new SolrIndexProperty as a facet and want to define it using facet ranges. What do you need to do to achieve that?

- * Manually create SolrValueRange items to define the range boundaries. Create a SolrValueRangeSet, add SolrValueRange items, and add to the SolrIndexProperty.
- * Define the number of ranges in the SolrIndexProperty. Provide sample data that is used to generate the SolrValueRange items.
- * Define the cadence of the ranges in the SolrIndexProperty. Provide the sample data that is used to generate the SolrValueRangeSet.
- * Create SolrValueRange items to define the range boundaries. Add them to the SolrIndexProperty.

QUESTION 21

What does the Cloud Portal application enable you to do? Note: There are 3 correct answer to this question.

- * Set up and deploy SAP Commerce Cloud in the public cloud.
- * Manage the configurations of your cloud hot folders.
- * Create and configure endpoints tied to configured aspects.
- * Review the page load times of your environments.
- * Generate new passwords for admin and anonymous users.

QUESTION 22

What should you pay attention to when connecting two widgets?

- * The output socket's type does not have to be the same as the input socket's type.
- * The input socket's type should be the same as the output socket's type.
- * The output socket's type must be the same as the input socket type.
- * The input socket's type must be a sub type of a composed item type.

QUESTION 23

You are creating a business process (mybusinessprocess) that requires an action (actionB) to pass an info String value to another action (actionE) occurring later in the process. What do you need to do to make this possible? Note: There are 2 correct answer to this question.

- * Create a myBusinessProcess item type that extends BusinessProcess and adds an info String property. Use an instance of this type to start the process in your Java code with businessProcessService.startProcess(new myBusinessProcessModel).
- * Create a myBusinessProcess item type that extends BusinessProcess and adds an info String property. Specify myBusinessProcessModel as the processClass argument to the process
- * Create an event myEvent that extends the AbstractProcessEvent and adds an info String property. Register the target action as a listener for this event. Fire the event with eventService.publishEvent (myEvent).
- * In the mybusinessprocess.xml definition file, define an info event and configure actionB as the event's originator and actionE as its target. Trigger the event in the class implementing actionB using businessProcessService.triggerEvent(info).

QUESTION 24

How can you start a business process in SAP Commerce Cloud? Note: There are 2 correct answer to this question.

- * Use the hot folder functionality by creating a file in the configured hot file.
- * Use the Backoffice Business Process section.
- * Invoke the appropriate method of the BusinessProcessService from a script in the hybris Administration Console (hAC) scripting console.
- * Invoke the appropriate method of the BusinessProcessService from Java code.

QUESTION 25

What is the purpose of the dynamic forms in the Backoffice?

- * To provide a dynamic extension of type definitions in the SAP Commerce platform
- * To provide dynamic client-side validation of web forms
- * To provide a dynamic layout of the wizards at runtime using drag and drop
- * To enable dynamic behaviors in the user interface of Backoffice applications

QUESTION 26

When a customer places an order using the default order management process defined in the yacceleratorfulfillmentprocess extension, when does the fulfillment process send the notification that the order has been placed?

- * After the order has been fraud checked
- * After the order has been completely sourced
- * At the first stage of the fulfillment process
- * After the payment has been processed

QUESTION 27

What can you do within the integration UI Tool in Backoffice? Note: There are 2 correct answer to this question.

- * Create a search restriction to secure an integration object for only a certain integration user group.
- * Set up access rights for integration objects.

- * Force-delete an integration object even if it is associated with an InboundChannelConfiguration (ICC).
- * Export the configuration types so that they can be imported into a target system.

QUESTION 28

You need to add a new Cockpit to the Backoffice to implement new features for a business user role. Which tasks are required?

Note: There are 2 correct answer to this question.

- * Create or reuse an add-on, and install it into the storefront.
- * Create a new multiplexer widget for the borderlayout widget.
- * Create or reuse a Backoffice extension with the proper meta information.
- * Add a new layout widget in config.xml.

QUESTION 29

During development, how do you ensure that the modified resources of an installed addon get copied into the storefront? Note:

There are 2 correct answer to this question.

- * Set up the resourceFilter.
- * Set up the addonFilter.
- * Run an ant all command.
- * Run an ant deploy command.

QUESTION 30

What is SmartEdit's Navigation Management page useful for? Note: There are 2 correct answer to this question.

- * It can define more than one navigation hierarchy, each accessed by a different component on the page.
- * It allows you to manipulate a hierarchy of CMSNavigationNode items, each of which may contain a CMSNavigationEntry.
- * It allows you to manipulate a parent-child hierarchy of CMSLinkComponent objects.
- * It is used to configure automatic mapping of the Product Catalog's category hierarchy to the navigation bar displayed on site pages.

QUESTION 31

You are running a transaction that creates an item and updates it twice. If the transaction is committed successfully, how many AfterSaveEvent items will the ServiceLayer create?

- * 1
- * 0
- * 3
- * 2

QUESTION 32

What happens when you use a deployment tag in the items.xml file? Note: There are 2 correct answer to this question.

- * All instances of the enclosing type are stored in the specified database table.
- * Only non-inherited properties of the enclosing type are stored in the deployment table.
- * The deployment typecode is used as part of the primary key (PK) of that type's items.
- * The name of the deployment table is generated automatically.

QUESTION 33

You updated a price row for a particular product using the Backoffice Product Cockpit and also made sure the cronjob for

synchronizing the involved product catalog was executed successfully. When you visit the category page containing the specific product, you discover that its new price value is NOT properly displayed. How can you fix this issue?

- * Synchronize the category page in the Backoffice Administration Cockpit
- * Run a Solr indexer operation in the Backoffice Administration Cockpit
- * Synchronize the involved product in the Backoffice Product Cockpit directly
- * Re-import the price using ImpEx

QUESTION 34

What must you always specify when you are creating a new Adaptive Search Profile? Note: There are 3 correct answer to this question.

- * Category
- * Index configuration
- * Index type
- * User
- * Catalog version

QUESTION 35

What are the advantages of using keyword redirection within Search and Navigation? Note: There are 2 correct answer to this question.

- * Customers can be redirected to a URL specified by the vendor.
- * Keyword redirects can be easily configured using the Backoffice administration perspective.
- * Keywords make Solr searches more efficient.
- * Keywords specify synonyms that redirect to standard catalog terms.

QUESTION 36

You are implementing two new independent extensions, extension A and extension B, both of which extend and overwrite a bean of the core platform. How can you make sure the bean from extension A doesn't override the one from extension B? Note: There are 2 correct answer to this question.

- * Use the beans' parent attribute in extension B to specify the core bean.
- * Add only one of the extensions into localextensions.xml at the same time.
- * The beans are loaded in alphabetical order; therefore, extension B takes precedence.
- * Define a dependency wherein extension B requires extension A.

QUESTION 37

What are the advantages of using classification attributes? Note: There are 2 correct answer to this question.

- * Cached classification attributes provide better performance than fixed properties.
- * Classification attributes are applied dynamically in response to customer actions.
- * Business users can create or modify classification attribute definitions using the Backoffice.
- * Rebuilding and redeployment are NOT required.

Earning the SAP P-C4H340-24 certification is valuable for individuals who want to advance their careers in SAP Commerce Cloud development. Certified Development Professional - SAP Commerce Cloud Developer certification validates an individual's knowledge and skills in developing and deploying SAP Commerce Cloud solutions, making them more marketable to potential employers. It also provides individuals with access to a community of SAP Commerce Cloud developers and resources to help them stay up-to-date with the latest SAP Commerce Cloud technologies and best practices.

SAP P_C4H340_24 exam is designed to test the knowledge and skills of individuals who wish to become certified development professionals in the field of SAP Commerce Cloud development. Certified Development Professional - SAP Commerce Cloud Developer certification exam focuses on assessing the ability of candidates to design, develop, and deploy SAP Commerce Cloud solutions that meet the specific needs of businesses. It is a globally recognized certification that is highly valued by employers and organizations.
